ProSquare™ INFLATIONS

***The most successful
line of milking inflations
being used today.***

ProSquare Inflations are effectively being used on herds where the production level reaches and exceeds 30,000 lbs/cow/year. Even with these performance challenges, outstanding teat and udder health is maintained when milking with ProSquare Inflations.

The ProSquare Inflation is patented, not only on its design parameters, but also on its actual performance.

It is the ProSquare patented design that achieves superior results.

New models of ProSquare Inflations have been designed to fit a wider range of shells and milking claws.
