# RESTORE HOOF CONCENTRATE & RESTORE HOOF TOPICAL

*A quadruple action formula for hairy heel warts, foot rot, white line and other associated diseases*

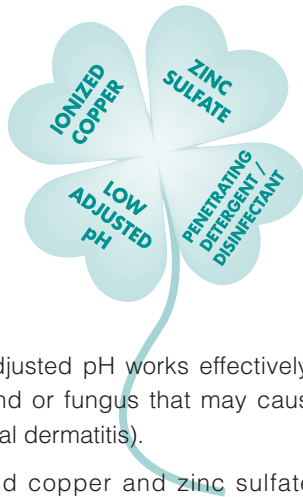

**ATTACKS FOOT PROBLEMS 4 WAYS!**

# RESTORE HOOF

## The QUADRUPLE Action Answer

**RESTORE HOOF** is a safe, effective and bio-degradable product designed for use in the foot bath. It can be used on cattle (beef and dairy), and sheep. The QUADRUPLE action formula was developed to provide the benefits of ionized copper, zinc sulfate, a low adjusted pH and a detergent/surfactant. Various other products on the market only provide one or two active ingredients and have been found to work only in limited cases. **RESTORE HOOF** gives you a wide spectrum of solutions enabling this product to work under the toughest hoof and environmental conditions. The unique four dimensional attack on hoof problems has not been available in one, easy to use, product until the introduction of **RESTORE HOOF**.

- The low adjusted pH works effectively against the bacteria and or fungus that may cause hairy heel warts (digital dermatitis).
- The ionized copper and zinc sulfate treats and prevents foot rot and other associated foot conditions.
- The detergent/disinfectant is an excellent surfactant allowing the solution to penetrate the tissues and kill the disease causing organisms.

## Healthy Hooves are Dependent on:

1. Proper nutrition and good management practices.

2. Good Veterinary care and regular hoof trimming.

3. Regular use of **RESTORE HOOF / RESTORE HOOF TOPICAL** in a properly designed treatment and control program.

Any of the elements alone will not effectively control or treat the various hoof conditions present on your farm. Good herd management, proper nutrition, veterinary care, timely hoof trimming and regular use of **RESTORE HOOF** is the winning formula! Daily use of **RESTORE HOOF TOPICAL** spray is part of an effective treatment program. Use of **RESTORE HOOF CONCENTRATE** in the foot bath is then recommended as a control program. Adverse weather, poor yard surface or muddy pens are all conditions which would require more frequent changes of the foot bath solution. **RESTORE HOOF CONCENTRATE** may also be safely used in rotation with other foot bath solutions.

## RESTORE HOOF - Lab proven

University of Minnesota tests show **RESTORE HOOF** will kill the involved organisms. Eliminating the bacteria and fungi that may cause foot rot is the best way to prevent new infections. A major cause of lameness is foot rot, which is primarily caused by two types of bacteria, *Bacteroides nodosus* and *Fusobacterium necrophorum*. These bacteria will infect the soft tissues around the hoof causing abscesses. A mixture of **RESTORE HOOF** at the dilution recommended, kills both organisms.

While the exact cause of the elusive hairy heel wart is unknown, it is strongly suspected that one or more of the spirochete bacteria play a role in causing this malady. **RESTORE HOOF** is shown to be extremely effective in controlling spirochete bacteria.

Foot infections, once established, are almost impossible to eradicate. A good program can only provide the hope for long term control and improvement in the scope of the infections.
