COPPER
ADVANCEDTM
and beyond

IBA's Copper Advanced And Beyond Is A Ready-To-Use Spray For Individual Cow Care

- IBA's Copper Advanced & Beyond is a great alternative to foot baths where herd size, facilities and/or weather conditions don't allow for foot bath use.
- Great for use in stallion and tie stall operations as part of a daily protocol.

Indications For Use:

- IBA's Copper Advanced and Beyond is designed to quickly stop the progression of digital dermatitis and treat M1 and early M2 lesions. For best results, use IBA's Copper Advanced & Beyond on a clean, dry hoof.

Directions For Use:

Daily protocol for prevention and treatment of digital dermatitis in the whole herd.

- Spray the hooves with pressurized water and allow to dry 1-2 minutes before spraying them with IBA's Copper Advanced & Beyond.
- Spray IBA's Copper Advanced & Beyond from the ground up to 1-2 inches above the dew claw paying special attention to areas where a wart is visible.

Spot Spraying Individual Cows

Where A Wart Is Visible:

- Clean the hoof area with fresh water. Allow to dry for 1-2 minutes.
- Spray 3-5 squirts of IBA's Copper Advanced & Beyond directly on the individual wart and above the wart up to 2 inches above the dew claw. Do not wrap the hoof after treatment. After milking is complete, release the cow as normal.

Directions For Use While

Chute Controlled/Hoof Trimming:

- *M1 Lesions* - Clean the foot/wart area and trim as normal. After trimming, spray the wart with 3-5 squirts of IBA's Copper Advanced and Beyond.

Leave the foot up and constrained as long as practical. Wrapping is not necessary in most cases, but some environments would suggest a light wrap to keep the wart area clean longer.

- *M2 Lesion* - Clean the foot/wart area and trim as normal. After trimming, spray the wart with 3-5 squirts of IBA's Copper Advanced & Beyond. Light wrapping can be done in more advanced M2 lesions. Soaking a gauze pad with IBA's Copper Advanced and Beyond and placing it on the wart prior to wrapping is suggested to prolong the contact of IBA's Copper Advanced & Beyond with the wart while protected from the environment. If no wrapping is desired, leave the foot up and constrained as long as practical.

Additional Information:

- IBA's Copper Advanced and Beyond is NPE FREE
- Shake well before use
- Wear gloves and goggles when handling or spraying
- Avoid spraying teats since IBA's Copper Advanced & Beyond will stain.

NOTE:

- Both IBA's Copper Advanced and IBA's Hoof Bath & Beyond are available individually as concentrates from your IBA Dealer for use in a foot bath.
- Pump sprayers, wraps and a complete line of other hoof care products are available from your IBA Dealer!
