

Drench-Mate™

The Drench-Mate is a unique, high quality system specifically designed for pumping fluids into ruminants.

Drench-Mate™ I

Single
Dose

6.5
Gallons

The single dose system has a 6.5 gallon bucket with a locking screw top lid, a 9 foot poly-hose and a cam-lock fitting for easy detachment. The hose has an adjustable clamp that locks onto the nose tong and frick tube so that the hose does not slip out of the rumen while you are pumping. A red mark on the hose indicates how far it should be inserted into the rumen. Mounted on top is a hand diaphragm pump that has the capacity to drench a cow in 1-1.5 minutes. The Drench-Mate is made of hardened plastic and stainless steel hardware so it will not rust or corrode.

Drench-Mate™ II

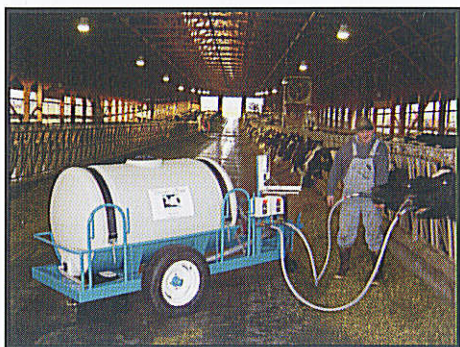

Multiple dose

55 Gallon

Mobile

Another popular size is the 55 gallon portable Drench-Mate II. This large poly tank has a Honda gas powered engine and a pump that has a 40 gallon per minute flow and is mounted higher than the bottom of the tank so that it can be completely drained during cold weather. A quad agitation system is used to insure your drench will stay in suspension. This unit is available on a 3 wheeled tow or pull cart. Included also are the same frick tube with nose tong attached and poly hose as the Drench-Mate I plus an extra gas can that fits on the cart.

Drenching
can be done
easily and safely
with one person!

Drench-Mate™ III & Drench-Mate™ III Mega

For the larger dairies there is a Drench-Mate III, featuring a 150-gallon capacity tank. For the even larger dairies we have the Drench Mate III Mega which is a 300-gallon tank. Both units come on a 2-wheeled heavy-duty pull cart and a 164-gallons per minute Honda engine. They also have two outlets and two timers so that you can drench two cows at the same time. A unique agitation system helps keep your drench product in suspension. As with all the Drench-Mate products, drenching can be done easily and safely with one person.
